

Jannat Al-Tohr

جَنَّةُ الطَّهْرِ

A retreat from everyday life

Design vision

*"Our aim is to create a **relaxation place** in which showering and bathing facilities will be available to residents. A way of escaping the camp and find themselves in a calming environment."*

Our aim is to:

Reduce the waste water, provide it in **recreational places** (water usage)

Revive the former **cultural feature of hammam**

Improve the **hygiene situation**

Increase the **green spaces**

Create missing **relaxation areas**

Location

Selection of location based on:

- **Density**
- **Walking distance**
- Water
- Other recreation
- Topology

Location |

suitable

non-suitable

Our plot

We selected a location in district 10.

Size of the plot is

25 x 50m

Location | final locations

suitable  non-suitable

Existing Hammam

We analysed **existing hammam** to look how they work

Base for our spaces and how we make the bubble diagram

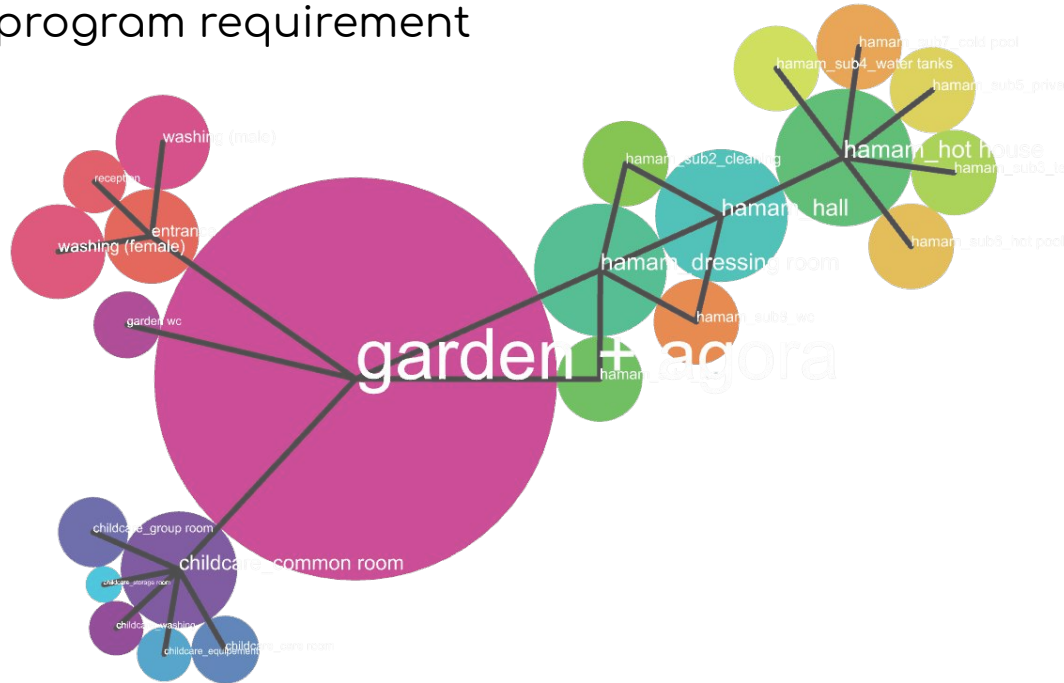

Spatial configuration of different hammam

	Garineh Kohne Hamam	total area	Golshan Hamam	total area	Dorod Hamam	total area	Chekneh Hamam	total area	Kaboli Hamam	total area	% percentages
		9		16		17		13		24	100%
		% of total area		% of total area		% of total area		% of total area		% of total area	% percentages
corridors		19		12		15		12		7	13
dressing room		24		12		10		12		7	13
hot house		24		11		11		13		12	14
subsidiary spaces		26		55		56		53		54	49
pool		7		9		8		11		19	11

Program of requirements, bubble diagram

The analysis of the different historical hammams resulted in the program requirement

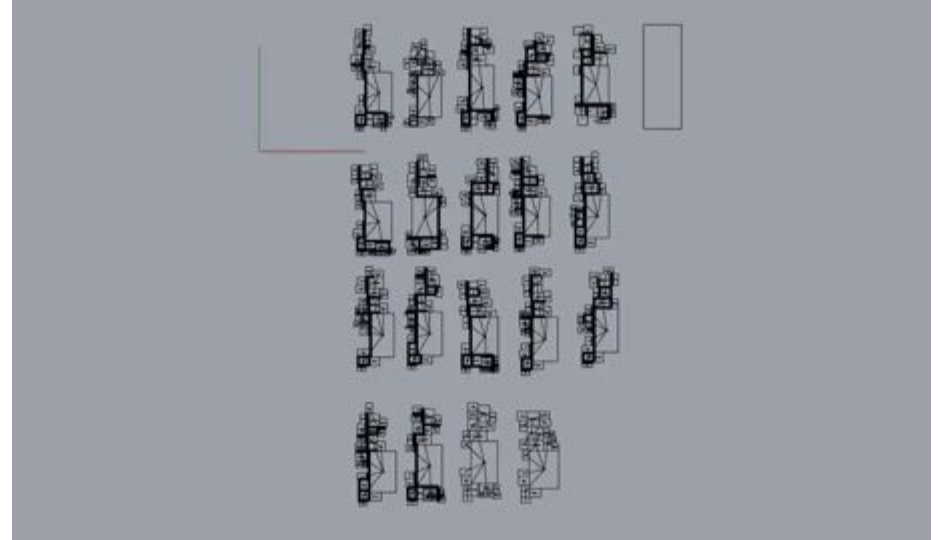

0:	entrance, 26sqm
1:	reception, 12sqm
2:	washing (female), 26sqm
3:	washing (male), 26sqm
4:	garden + agora, 488sqm
5:	garden wc, 14sqm
6:	childcare_washing, 8sqm
7:	childcare_common room, 40sqm
8:	childcare_group room, 14sqm
9:	childcare_care room, 14sqm
10:	childcare equipement, 8sqm
11:	childcare_storage room, 4sqm
12:	hamam_hall, 52sqm
13:	hamam_dressing room, 52sqm
14:	hamam_hot house, 56sqm
15:	hamam_sub1_tea, 22sqm
16:	hamam_sub2_cleaning, 22sqm
17:	hamam_sub3_tech, 22sqm
18:	hamam_sub4_water tanks, 22sqm
19:	hamam_sub5_private washing room, 22sqm
20:	hamam_sub6_hot pool, 22sqm
21:	hamam_sub7_cold pool, 22sqm
22:	hamam_sub8_wc, 22sqm
1026	

Computational approaches

Literal take on the bubble diagram

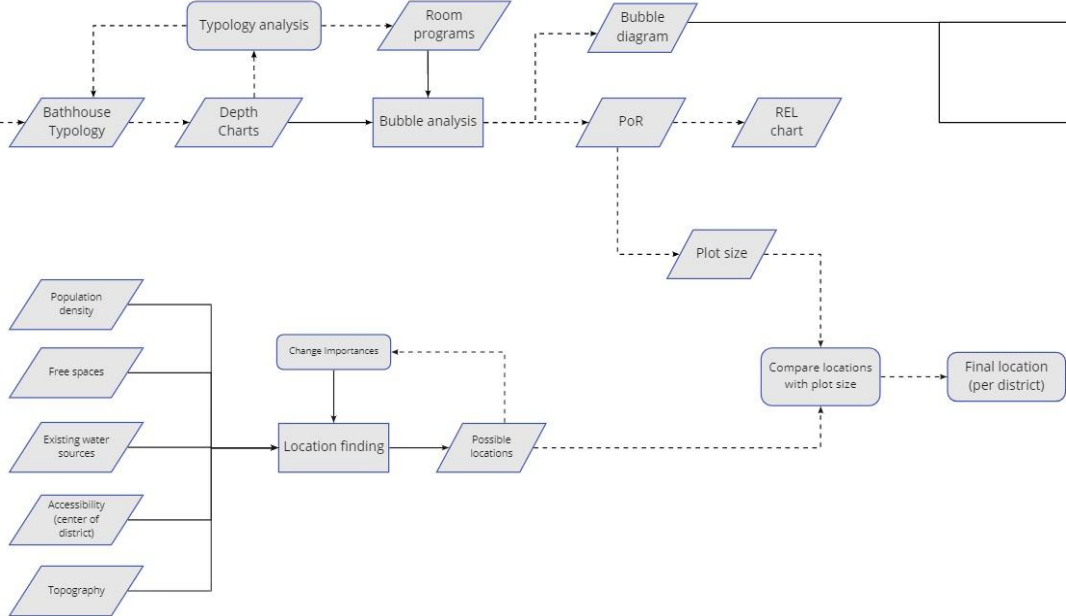

Magnetizing tool as configuration

Flowcharts

Week 1

Week 2

Triangular grid

Hexagons

*Compatible with
domes shapes*

*Topology of Hammam,
supports association
of the refugees*

THE GAME

Rule n01:

Stay on the **grid**

Rule n02:

The **entrance**
near the streets

Rule n03:

The childcare on
the **south** and
Hammam to the
east

Rule n04:

As **compact**, **court**
as big as possible

THE GAME

Continuous deformation with a hole requires a topological switch from a “ball” to a “mug with handle”

as compact :
Oliebollen

*as compact but
with a court:*
Donut

Rule n04:
As compact, court
as big as possible

THE GAME (Placing the rooms)

Rule n05:
After each room
add 1 row of
possible
corridors

Rule n06:
Apply
connections

(Not on scale)

THE GAME (Placing the rooms)

Rule n05:
After each room
add 1 row of
possible
corridors

*Thermal/privacy
difference*

Rule n06:
Apply
connections

Large distance

Direct connection

*Optical
connection*

THE GAME (Placing the rooms)

Rule n05:
After each room
add 1 row of
possible
corridors

*Thermal/privacy
difference*

Rule n06:
Apply
connections

Large distance

Direct connection

*Optical
connection*

Final layout (applying rules)

Grid

Final layout

Tessellation

all triangulate

the 1st constant quad split
& the next triangulate

all constant quad split

triangulate by snub+0

Tessellation

all triangulate

*the 1st constant quad split
& the next triangulate*

all constant quad split

triangulate by snub+0

Final layout

Domes

The main room structure will be constructed with domes

Vaults

The connectional spaces and room extensions will be structured with vaults

Stoa

Final mesh

Section and different heights

How to make it possible?
